

Step 1 Place the wire panels on a flat surface with the door facing up.

Step 2 Unfold the front, back, and side panels.

Step 3 Lock the two side panels onto the back and front panels by snapping the wire hook onto the wire frame.

Note: If the wire hooks have become bent in shipping, carefully pry them open until they fit on the wire frame.

Step 4 Pick up the cage top and set it onto the plastic base. Use the attachment latches to lock the top to the base.

Attach the 5" Elbow Tube to the underside into place on the hole in the shelf. Insert the assembled shelf and tube through the top doorway. Snap shelf to cage wire on the 7th wire up from the bottom.

Insert the Wheel Pin into the center hole in the back of the wheel. Attach the exercise wheel assembly near the center of the back wire panel between the 3rd and 4th wire up from the bottom. Turn the Wheel Pin vertically against the horizontal wires to lock in place.
